

ROUND TOP – CARMINE I.S.D. FOOD ALLERGY MANAGEMENT PLAN

Food allergies can be life threatening. The risk of accidental exposure to foods can be reduced in the school setting if schools work with students, parents, and physicians to minimize risks and provide a safe educational environment for food-allergic students.

Family's Responsibility

- Notify the school of the child's allergies
- Work with the school team to develop a plan that accommodates the child's needs throughout the school including the classroom, in the cafeteria, in after-care programs, during school-sponsored activities, and on the school bus, as well as a Food Allergy Action Plan.
- Provide written medical documentation, instructions, and medications as directed by a physician, using the Food Allergy Action Plan as a guide.
- Provide properly labeled medications and replace medications after use or upon expiration.
- Review Policies/procedures with the school staff, the child's physician, and the child (if age appropriate) after a reaction has occurred.
- Provide emergency contact information.
- Educate the child in the self-management of their food allergy including:
 - Safe and unsafe foods
 - Strategies for avoiding exposure to unsafe foods
 - Symptoms of allergic reactions
 - How and when to tell an adult they may be having an allergy-related problem
 - How to read food labels (age appropriate)

School's Responsibility

- Be knowledgeable about and follow applicable federal laws including ADA, IDEA, Section 504 and FERPA and any state laws or district policies that apply.
- Review the health records submitted by parents and physicians.
- Include food-allergic students in school activities. Students should not be excluded from school activities solely based on their food allergy.
- Identify a core team of, but not limited to, school nurse, teacher, principal, school food service and nutrition manager/director, and counselor (if available) to work with parents and the student (age appropriate) to establish a prevention plan. Changes to prevention plan to promote food allergy management should be made with core team participation and to develop, implement and monitor the district's allergy management plan, reviewing annually.
- Assure that all staff who interact with the student on a regular basis understands food allergy, can recognize symptoms, knows what to do in an emergency, and works with other school staff to eliminate the use of food allergens in the allergic student's meals, educational tools, arts and crafts projects, or incentives.

Round Top-Carminc ISD Food Allergy Management Plan

- Coordinate with the school nurse to be sure medications area appropriately stored, and be sure than an emergency kit is available that contains a physician’s standing order for epinephrine. In states where regulations permit, medications are kept in an easily accessible secure location central to designated school personnel, not in locked cupboards or drawers. Student should be allowed to carry their own epinephrine, if age appropriate after approval from the student’s physician/clinic, parent and school nurse, and allowed by state or local regulations.
- Designate school personnel who are properly trained to administer medications in accordance with the State Nursing and Good Samaritan Laws governing the administration of emergency medication, including the use of stock medications for anaphylaxis per physician standing orders.
- Be prepared to handle a reaction and ensure that there is a staff member available who is properly trained to administer medications during the school day regardless of time or location.
- Review policies/prevention plan with the core team members, parents/guardians, student (age appropriate), and physician after a reaction has occurred.
- Work with the district transportation administrator to assure that school bus driver training includes symptom awareness and what to do if a reaction occurs.
- Recommend that all buses have communication devices in case of an emergency.
- Enforce a “no eating” policy on school buses with exceptions made only to accommodate special needs under federal or similar laws, or school district policy. Discuss appropriate management of food allergy with family.
- Discuss field trips with the family of the food-allergic child to decide appropriate strategies for managing the food allergy.
- Follow federal/state/district laws and regulations regarding sharing medical information about the student.
- Take threats or harassment against an allergic child seriously.
- Request food allergy information annually from all students in the district.

Student’s Responsibility

- Should not trade food with others.
- Should not eat anything with unknown ingredients or know to contain any allergen.
- Should be proactive in the care and management of their food allergies and reactions based on their developmental level.
- Should notify an adult immediately if they eat something they believe may contain the food to which they are allergic.
